

# How to set the dial-in script in Windows NT 4.0.

1/15/98

Double click on "My Computer". Double click on "Dial-up Networking". Choose "Cloudnet" under the "Phonebook entry to dial:". Click on the "More" button and choose "Edit entry and modem properties".

Click on the "Script" tab. Choose "Run this script", then select "Generic Login" in the field. When you are done, the screen should look like this:

Click on "Ok" - then click on "Close". Close "My Computer".

You are ready to proceed with the rest of the instructions.
